Introducing Anti-microbial **SILVER Ion** Technology

AOL - HAND WASH

Integrated with SILVER Ion Technology

About RAA AOL Hand Cleanser

RAA AOL Hand Wash is a special formulation that is effective in controlling microbe growth. The product is infused with High End **SILVER Ion Technology** which results in instant action against bacterial organisms which makes it a rapid action, gentle and easy to use product.

The Hand Wash disinfects hands during washing, but also the incredible **SILVER Ion Technology** also prevents the metabolism of the bacterial cells for a prolonged period of time, thus prevent pathogen multiplication and regeneration. Thus keeping your hands disinfected for a longer time frame.

Why is it so Important and Effective?

Traditional Hand Washes simply disinfect when used. But what happens after washing of your hands? Every microbe tends to multiply itself even if there is little Microbial Infection left unclean. The solution to this problem lies in the **SILVER Integrated** formulation of RAA AOL Hand Cleanser. The RAA AOL Hand Cleanser offers multi-layer protection.

Layer 1 Protection: - Speciality additives in the hand cleanser disrupt the cell membrane of the bacteria, which makes the microbe further susceptible to the action of **SILVER Ion**.

Layer 2 Protection: - The **SILVER Ion** Technology, interrupts the DNA Strand of the bacteria, which stops the metabolism and multiplication of the bacteria cells.

Layer 3 Protection: - This eliminates the re-generation of microbial cells thus eliminating the risk of re-infection.

How to use?

- Simply dispense one to two pump of the Hand Wash Bottle on wet hands, scrub your hands gently and wash thoroughly under running water.

Things to take care off

- Keep away from direct sunlight
